Personal Profile

I'm Web and Mobile Developer at Oplence global with experience in Frontend, Backend and Database languages, I am eager to bring my collaborative, communicative & problem-solving skills which allow me to develop strong web applications.

Summary Qualifications

- Understanding programming and formatting languages like Javascript, jQuery, HTML, HTML5, CSS, and CSS3
- Knowledge of cross-browser compatibility, security principles, object-oriented design and web services
- Managing databases and servers
- Coding for functionality across multiple languages and platforms
- Communicating with specialized developers and the graphic design team to deliver the best possible product
- Keeping up with emerging technology that may serve the business needs
- Prototyping minimal viable products for communication with company stakeholders.

Tech Stack

Languages: JavaScript ES6+, JSX,

Front-end: HTML, CSS, Sass, Accessibility, Bootstrap, DOM, JQuery, ReactJs, React-Native, React-Redux, React-Redux Tool-kit

Back-end: Node.Js, Express.Js

Database: MongoDB, MySQL, Firebase

Other: RESTful APIs, OOP, Git, GitHub, Netlify, Slack, Discord, Ngrok, Bitbucket

Exploring: TypeScript, PHP, Laravel

Problem-Solving | Leadership | Communication | Teamwork | Adaptable | Decision-making

RECENT PROJECTS

Money Tracker [LIVE](#) | [GITHUB](#)

- The Money Tracker application is used to record income and daily expenses.
- Users can view a summary of money, which comes in and goes out on the Money Tracker dashboard with the record date, more
- The application will convert user entries into cash flow reports, so users can easily tally income or expenses transactions and check current remaining balance.

React Native Mobile App (Tracker App) [GITHUB](#)

- Tracker Mobile Application will show the real-time user's current location on Map.
- The application will save the user's moving location routes on a map and make a list of the routes saved by the user with the Tracks name.
- Users can authorize the application so they can easily handle their tracks.

REACT-NATIVE | JSX | AXIOS | MONGODB | EXPRESS | CONTEXT API | REDUCER | EXPO GO | NGROK

FoodHub [LIVE](#) | [GITHUB](#)

- The FoodHub application uses Axios to fetch data from Edamam API, where users will explore thousands of cuisine recipes by searching food names, moreover
- The Foodhub users can write their own recipes and post them on the FoodHub website,
- I used the google firebase database to store users written recipes so that other users can take advantage of your recipe.
